Please find below and/or attached an Office communication concerning this application or proceeding.

# Office Action Summary

Application No.

09/514,338

Applicant(s)

TANABE ET AL.

Examiner

Chong H. Kim

Art Unit

3682

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## Status

- 1) ☒ Responsive to communication(s) filed on 30 June 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

## Disposition of Claims

- 4) ☒ Claim(s) 15-29 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 15-29 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

## Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on \_\_\_\_\_ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

## Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- \* See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

## Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☒ Information Disclosure Statement(s) (PTO-1449) Paper No(s) 20.
- 4) ☐ Interview Summary (PTO-413) Paper No(s). \_\_\_\_\_.
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other: \_\_\_\_\_.

### DETAILED ACTION

The Examiner acknowledges the Applicant's Request for Reconsideration filed Jun 30, 2003 in response to the Office action made on Apr 2, 2003.

#### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 15-19, 21, 24, and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakada et al., U.S. Patent 5,792,302 in view of Nishibori, U.S. Patent 5,869,138.

Nakada et al. shows, in Figs. 1-5, a steering wheel comprising;

an annular rim 1a including;

a core 2;

arcuate-shaped and elongated rim elements 3, 4 mounted on the core 2;

wherein an annular streak pattern (as shown in Fig. 3B) extends along a

longitudinal axis of each of the elongated rim elements;

a boss section (in the middle of the spoke section 1b) and a spoke section 1b, the annular rim section 1a being connected to the boss section by the spoke section 1b;

wherein the arcuate rim elements include a front-side rim element having a central longitudinal groove 13, and include a rear-side rim element having a central longitudinal groove

Art Unit: 3682

13, the core 2 being fit into the central longitudinal groove 13 of each of the front-side rime element and the rear-side rim element so as to mount the rim elements 3, 4 on the core 2 (as shown in Figs. 3-6);

wherein the arcuate rim elements include an outer-side rim element having a central longitudinal groove 13, and include an inner-side rim element having a central longitudinal groove 13, the core 2 being fit into the central longitudinal groove 13 of each of the outer-side rime element and the inner-side rim element so as to mount the rim elements 3, 4 on the core 2 (as shown in Figs. 3-6), and the rim elements having a uniform thickness (the rim element 3) substantially equal to a diameter of the core;

a coating covering the arcuate rim elements 2, 4 (as described in column 9, lines 31-5);  
and

wherein the annular rim section further includes a grip portion 25 formed of flexible urethane and mounted on the core 2 (as described in column 8, lines 56-61 and in column 7, lines 9-11);

but fails to show the rim elements being formed of thermosoftening synthetic material blended with woodmeal so as to form an annular streak pattern on an outer surface thereof and a color pigment blended therein to show different colors wherein the rim section has surface unevenness.

Nishibori teaches, in column 2, lines 4-20, a material that is made of a thermosoftening synthetic resin (thermoplastic resin) blended with wood meal so as to form an annular streak pattern (wooden pattern) on an outer surface and wherein a color pigment (colorant) is blended

Art Unit: 3682

therein such that the annular streak pattern on the outer surface includes annular streaks of different color, and the surface having a surface unevenness.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the steering wheel rim section made of wood of Nakada et al. with the material being made of thermosoftening synthetic resin including wood meal and color pigment of Nishibori in order to provide a molded product that contains the wooden grain that of the natural wood with reduced cost compared to the real wood.

3. Claims 20, 22, 23, 25, 26, 28, and 29 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakada et al. in view of Nishibori as applied to claims 15, 19, 21, and 24 above, and further in view of Young, Jr. et al., U.S. Patent 3,802,291, in view of Kiyoshi, JP Pub No. 07117326, and in view of Uchida, U.S. Patent 4,581,954.

Nakada et al. in view of Nishibori shows, as discussed above in the rejection of claims 15, 19, 21, and 24, the steering wheel comprising the arcuate-shaped and elongated rim elements formed of thermosoftening synthetic material blended with wood meal so as to form an annular streak pattern on an outer surface thereof, but fails to show a cover member mounted on the seam; the protective coating covering only the front-side portion of the arcuate rim element; a transfer print on a front-side of the annular rim section; and the arcuate rim elements having the first rim having a notch for receiving the core and the second rim having the substantially equal thickness to the diameter of the core to be fitted in the notch.

As to the matter of the cover member mounted on the seam, Young, Jr. et al. shows, in Fig. 3, a steering wheel comprising a seam wherein a cover 106 is mounted on the seam.

Art Unit: 3682

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to apply the cover as taught by Young, Jr. et al. on the seam of Nakada et al. in view of Nishibori in order to provide a more pleasing design so that the value of the product is maintained.

As to the matter of the protective coating covering only the front-side portion of the arcuate rim element, it would have been obvious to modify protective coating of Nakada et al. in view of Nishibori by having the protective coating covering only the front-side portion of the arcuate rim element, since applicant has not disclosed that having the protective coating covering only the front-side portion of the arcuate rim element solves any stated problem or is for any particular purpose and it appears that the protective coating would perform equally well by covering other parts of the rim.

As to the matter of the transfer print on a front-side of the annular rim section, Kiyoshi, discloses, in Figs. (a)-(c) and in the Abstract, a steering wheel comprising transfer print on a front-side of the annular rim section wherein the transfer print includes a transfer ink layer having a thickness gradually reduced toward a rear-side of the annular rim section so that a ground pattern formed by the transfer ink layer gradually appears on the annular rim section when viewed from the rear-side toward the front-side.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the rim of Nakada et al. in view of Nishibori with the transfer print of Kiyoshi in order to “raise a decorative design of a product, and a seam of a transfer pattern is made difficult to be visually confirmed” as described in the Purpose of the Abstract by Kiyoshi.

Art Unit: 3682

As to the matter of the arcuate rim elements having a first rim having a notch for receiving the core and a second rim having a substantially equal thickness to the diameter of the core to be fitted in the notch, Uchida shows, in Fig. 5, a steering wheel comprising an arcuate rim elements 10' include a first rim element 11 having a longitudinal notch formed therein for receiving the core 7, and a second rim element 114 having a thickness (near the core 7) substantially equal to a diameter of the core 7 and being fitted into the notch of the first rim element 11 after the core.

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the two halves of Nakada et al. in view of Nishibori with the cover assembly of Uchida in order to provide a more securely engaged mechanism so that the steering wheel would last longer.

#### ***Response to Arguments***

4. Applicant's arguments with respect to claims 15-27 and 29 have been considered but are moot in view of the new ground(s) of rejection.

5. In response to the applicant's argument that Uchida fails to teach the second rim element having a uniform thickness substantially equal to a diameter of the core, it is the Examiner's view that Uchida shows the element as recited in claim 28. Claim 28 recites that the second rim element has a uniform thickness substantially equal to a diameter of the core. Claim 28 does not specifically define the metes and bounds of the words "uniform thickness". Therefore, one of ordinary skill in the art may draw a reasonable conclusion that the second rim element 114 of

Art Unit: 3682

Uchida includes a uniform thickness at a location where the element 114 contacts the core 7 along the entire core circumference.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Chong H. Kim whose telephone number is (703) 305-0922. The examiner can normally be reached on Monday - Friday, 9:00 - 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David A Bucci can be reached on (703) 308-3668. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 305-7687 for regular communications and (703) 305-7687 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1113.
